## PROFILE SUMMARY

**Full-stack developer with 2 years shipping production systems end-to-end** — Python/FastAPI and Node.js backends, React/TypeScript frontends, and AI-driven workflow automation at scale. **Won 8 international hackathons** and received a Fhenix Foundation **grant** for a confidential lending protocol built on an FHE engine. Comfortable owning a feature from API design through to a shipped UI.

## EXPERIENCE

### Stealth Startup - Remote

May 2025 – April 2026

#### Full Stack Engineer

- Built and deployed AI bots handling customer-facing interactions — cut manual response load across inbound workflows.
- Automated end-to-end communication workflows via WhatsApp API; AI-driven conversations at scale with zero human handoff on routine tasks.
- Shipped full-stack product features — REST APIs, React frontend, Python & Node.js backend — on tight weekly cycles from design to production.

### Edunet Foundation × Microsoft

Apr 2025 – May 2025

#### AI & Cloud Internship Trainee

- Designed and deployed a production AI system on Azure AI + OpenAI API, integrating scikit-learn ML models — complete from data pipeline to cloud inference endpoint.
- Applied Deep Learning and Generative AI techniques under direct mentorship from Microsoft engineers; completed 40+ hours of structured ML and cloud architecture training.
- Certified by AICTE for cloud and AI proficiency; demonstrated hands-on capability across Azure Cognitive Services, OpenAI embeddings, and scikit-learn pipelines.

## PROJECTS

### Walnut — Confidential On-Chain Lending Protocol [ Fhenix Foundation Grant Recipient ] [Link](#)

Stack: Solidity · Fhenix CoFHE SDK · React · TypeScript · Hardhat · Ethers.js

- Built the first FHE-native confidential lending protocol** on Fhenix — collateral amounts, debt positions, health factors, and liquidation thresholds are **fully encrypted end-to-end**; protocol logic executes on ciphertext via Fully Homomorphic Encryption.
- Eliminated MEV extraction and liquidation front-running by routing all state transitions through **private mempool** — zero on-chain data leaked during execution.
- Engineered a **unified encrypted vault architecture** with an institution-grade risk engine — health factor computations run entirely on encrypted inputs without ever decrypting user balances.
- Selected for a **competitive grant from Fhenix Foundation (USA)** out of a global buildathon pool; protocol actively in production development (Wave 8 target).

### SAAD — AI Sentiment Alert System [Link](#)

Stack: Python · OpenAI API · Twitter/X API · Reddit API · FastAPI · Slack Webhooks · PostgreSQL

- Built an **autonomous AI agent** that continuously monitors Twitter/X and Reddit for brand mentions in real-time — ingesting and classifying **1,000+ posts/hour** with sub-5-second alert latency.
- Advanced sentiment analysis pipeline** using transformer-based NLP classifies mentions as positive / negative / neutral with intent detection — surfacing actionable signals, not raw noise.
- Integrated direct **Slack and Email alerting** with configurable thresholds, enabling marketing and product teams to act on sentiment spikes without touching the dashboard.
- Designed for **multi-brand, multi-keyword tracking** with historical trend reporting — deployable as a SaaS product or internal brand intelligence tool.

## SKILLS & TOOLS

**Languages** - Python, JavaScript, TypeScript, SQL

**Framework** – React.js, FastAPI, Node.js, Express.js, Next.js

**AI/ML** – LLM Integration, Agent Pipelines, RAG, Hugging Face, Scikit-learn

**Cloud** – Azure AI, Firebase, Docker

**Tools & Platforms** — Git, GitHub, Google Colab, Microsoft Office (Excel, Word, PowerPoint)

## ACHIEVEMENTS & ACTIVITIES

- Grant Recipient — Fhenix Foundation (USA):** Built Walnut Protocol, a confidential on-chain lending protocol using Fully Homomorphic Encryption (FHE); selected for a grant from Fhenix out of a Buildathon on Akindo.
- ETH Mumbai Hackathon — Winner & 15+ National Hackathons | 8 Wins:** Consistent top finisher across national-level tech competitions spanning Web3, AI/ML, and full-stack domains — including events on ETHGlobal, Devfolio, and Akindo platforms.
